For almost three decades, Movacolor has been dedicated to coloring the world in a sustainable way. We do so by developing high-precision gravimetric and volumetric dosing systems. Our knowledge, experience and innovation capabilities are invested in a comprehensive portfolio of user-friendly products. These work easily and effortlessly together in advanced systems that conserve additives, increase production flexibility and deliver excellent results.
A world without color is impossible to imagine

Color is all around us - and people want more of it! Movacolor helps to color the world with its high-precision dosing systems. These allow the plastics industry to create attractive, flexible, lightweight products of all kinds. As the world population increases and becomes more prosperous, demand for these products keeps growing.

Solutions for a changing world

Growing demand is great for the industry, and so are the many new opportunities that robotic and 3D printing present. However, these developments put more pressure on the availability of raw materials and additives required to create plastic products. Production costs and sustainability are becoming urgent issues. This is where Movacolor’s advanced and easy-to-use dosing systems come in. They ensure you get maximum use out of every microgram of material in every production situation. This enables you to operate as flexibly, sustainably and cost effectively as possible - so we can keep coloring the world together.

Movacolor helps you achieve key business priorities:

- Cost control
- Constant quality
- More flexibility in your production processes
For almost thirty years, Movacolor has been developing advanced gravimetric and volumetric dosing systems for injection molding machines and extruders. We always integrate the latest interactive technology into our individual products.

The result
You have a remarkable degree of direct control over the production process. Reliability and ease of use are also top priorities in developing our systems. This results in a very simple to operate system.

Another Movacolor advantage is the modular nature of our systems. This allows you to easily adapt or expand them whenever you want. For instance, you can add new components - up to 15 in total - to an existing production line. This gives you unprecedented flexibility in responding to new market demands and developments, and making the most of the opportunities they present.
Movacolor has mastered every detail of the art of dosing. We were one of the first to apply gravimetric dosing technology in the plastics industry. Since then, it has become the standard for many, thanks to the proven business benefits.

Today, no other technology in the world is as accurate as Movacolor’s dosing cylinder® and our patented gravimetric weighing technology. And this holds true whether your production output is very small or very large.

The unique Movacolor dosing cylinder® delivers extremely constant, pulsation-free dosing over a wide capacity range. This allows you to dose spot-on: no extra dosing of expensive additives is required to compensate for irregular dosing or mixing.

The result
20-50% savings on your additive consumption.

Solutions for every additive
Movacolor offers solutions for every type of material, including the most challenging masterbatches, powders, liquids and regrinds.
Our experts closely follow new trends in the plastics industry, providing innovations that enable you to quickly respond to them. Recent examples include robotization, 3D printing and an increasing demand for smaller orders, more color and high-quality plastic products in general. All of this requires dosing systems that are not only flexible, but that can also be easily integrated into your company’s IT system.

The art of precision dosing takes place at an interface between people and technology. One of the key goals of Movacolor’s in-house Research & Development department is to make sophisticated technological developments applicable in a practical way that you can easily use to increase the return of your production processes.
Contact us
Should you have any questions, please contact the Movacolor distributor closest to you. Also feel free to get in touch if you would simply like more precise insight into the difference that using a Movacolor dosing system could make in your business. Working together, we hope to continue coloring the world in a long-lasting, sustainable way.

WHEREEVER YOU ARE

With Movacolor, you work with a world player that has decades of experience in a wide variety of sectors: PET, packaging, caps & closures, cables, profiles, pipes, automotive, sheets, film, medical, toys, household - or another sector.

Our partnerships span the globe. They link up an extensive network of distributors that locally serve and support our customers - wherever they may be.
